Bug Report

Bug Report Number	Status	Reason if invalid	Comments
1	Valid		
2	Valid		
3	Valid		
4	Valid	(Notice this test case fails not because the * symbol not works, but it would only work when there is a directory before it. Something/* or Something/something* would both work, see our test cases for globbing, but yes, echo * does not work and it is a bug that we need to fix)	
5	Valid		
6	Valid		
7	Valid		
8	Invalid	Duplicate of bug report #7. Both are about the file.separator. Our team did not notice that file.separator should be used. Therefore, #7 and #8 should refer to the same bug.	
9	Valid		
10	Valid		
11	Invalid	Redirection of the input means you do not read from files, but from the stdin, therefore it has no ways for wc application to get to know the file name. I doubt there is a bug for wc in the grader's project.	
12	Valid		
13	Valid		
14	Valid		
15	Invalid	As the project description does not talk about what if there are more than one -n options, our behavior which just tells the users to use one -n option should be OK.	

16	Invalid	As the project description does not talk about what if there are more than one -n options, our behavior which just tells the users to use one -n option should be OK.	
17	Invalid	Duplicate of bug report #13. Both about invalid option for tail.
